What is the Spa/Pool Hub?

The Spa and Pool Hub is a logic driven control system for your Spa or Pool, operated via a 7" full colour touch screen, It can control either a pool on its own, one or two spas, or a small pool and spa from one screen.

What kind of projects does it suit?

Each controller is made to order to your specification and can suit any project from a residential tiled spa with a small plant room, to a larger commercial pool or spa in a hotel or holiday park.

What's included?

We supply a pre-wired control box with all the switch gear and contactors mounted inside a metal control box. This makes for safe and easy installation into the plant room.

We include a pre-configured 7" full colour touch screen with lots of easy to use features & settings such as temperature control, filtration times, pump run on, guided maintenance screen and much more.

What's different about the Spa/Pool Hub?

When you choose the Spa/Pool Hub we work with you to specify, build & supply the entire control element for your pool or spa to make sure everything works together as intended from day one. This saves a huge amount of time on site. Your electrician will just need to wire in the equipment and connect up the power - simple.

A management tool

With features such as remote monitoring and CCTV you can easily keep a watchful eye over the running of your plant room. Spa hub can integrate with other equipment such as chemical auto dosers so you can easily see at a glance whether the sanitiser levels are safe, offering complete peace of mind . The system can also log events such as water level changes as well as logging error codes, faults and of course key parameters such as temperature and chemical levels.

**3D Modelling available**   **Pre-Wired Panel**   **Easy to use touch screen controls**

OVERVIEW SCREEN
- System Status
- At a glance overview of key parameters such as Temperature, Sanitiser Levels - PH, Chlorine (if integrated with a chemical auto doser)
- View and adjust temperature set point.

GUIDED FUNCTIONS
- Pictoral guides to assist the user through processes like back wash.
- Perfect for settings where turnover of staff may be high.

EVENT LOGS
- Historical data logs to track usage, events, errors, faults, temperature
- This enables engineers to more easily fault find, should a piece of equipment fail.

ALARM STATUS
- The system can be set to email or text a manager or maintenance contractor as soon as there is a fault or error.

TIMERS
- Set up & configure filtration timers, run timers and purge timers at the touch of a button.

Options
- Remote Monitoring/Email Alerts
- CCTV
- Secondary Screens
- Integration with Auto Dosers (Astral & Certidos)
- We also offer complete packages for spa installs includeing Tiled Spas, Equipment/packaged plant

How to order/enquire?
To enable us to quote please fill in an enquiry form that can be downloaded from our website, we'll then get an engineer to contact you to discuss your project in more detail.Filling the form in will help us to specify the right solution for you. We need to know as many details as possible about your project.
